

The Power of Medtech: California

AdvaMed is the leading national trade association promoting medical technology to achieve healthier lives worldwide.

The United States is the largest incubator for lifesaving, life-enhancing medical technology, leading a global industry. Each state has a medtech presence, from multinational corporations to the vast majority of medtech companies, startups (94 percent) with fewer than 20 employees (82 percent). All play a critical role, from creating new technology to diagnose cancer and manage diabetes to supplying heart valves, knee replacement joints, and complex scanners to detect disease or injury.

California is the biggest medtech center nationwide in revenue, jobs, and payroll.

Medical device and diagnostics manufacturers drive significant economic value to the state, local communities, and residents, from providing opportunities for high-skilled and high-paying jobs in various sectors to pioneering life-changing health care technologies for patients all over the world.

83,600 jobs

in California are supported by medtech

Medtech in California is a **\$32.6 billion industry.**

California medtech employees make an average of
\$118,708 per year.

California is home to 176 AdvaMed member sites and 68 AdvaMed Accel member sites for small, emerging companies:
